

**Titan Tornado MG-1
Donald Kern
EAA#: 50936
Beverly Hills, FL
N773DK**

This aircraft was completed in early April after two years of relaxed construction. The test flying is being done by Steve Flynn of Central Florida Flyers and he reports preliminary performance figures as 1200 ft./min. climb and a cruise of 90 mph. This is the first Titan with the Verner 133M engine and it is equipped with a Warp Drive 68 inch prop. Empty weight is 520 pounds and fuel burn is between 2 and 2.5 gallons per hour. The registration number was chosen because I was 77 years old when I completed the aircraft and 3 for the year 2003.
